Giovanni De Conti

Product and service design
decontigiovanni02@gmail.com
@decontigiovanni

About me

(in short)

01

Hi, I'm Giovanni,
product and visual design student
at IUAV University of Venice, aiming
to be a service designer one day.

I'm really much passionate about
fashion and travelling, during the
second year of my bachelor degree
I went to Cologne, Germany as
Erasmus exchange student at KISD
International University where I had
the occasion to develop projects
and where I finally had the chance
to test my ability in an international
environment.

During this last year I had the
chance, thanks to Erasmus
traineeship, to spent my curricular
internship as product designer at
External Reference, an architecture
studio in Barcelona.

I'm particularly interested into
understanding relations that
revolves around the design
descipline and today society, with a
special attention for economic and
philosophy.

About me

Arcadia Project

Arcadia project used to be the name of the **fashion project** I started as an hobby during high school, where in the middle of mathematics, science and literature, I really needed a source of concrete creative output, that's why I decided to start producing basic products, t-shirts, hoodies, gadgets, designed with my vision and while actually having a lot of fun and selling them through Instagram, I think especially during those years, having such place where my creativity was able to let be free was a really fulfilling experience, that helped me a lot gaining experience in the ecommerce world and **social media communication**.

	01	
	Ohne Phone team project	
06	Brief → Let's say we will consider the dopamine effect to which we are now subjected through smartphones and computers as a concrete issue. What could be a device that is sensitive to this issue and at the same time effective and functional? This is Ohne Phone, the project that me and Sigurdur proposed at KISD University as self initiated project.	
	Role: Product design, modelling and rendering Duration: 4 months Type: Team project, self initiated project in university Grade: 2nd year Software: Rhinoceros, Photoshop, Keyshot	
	Made in Cologne, Germany	
	w/ Einarsson Mäntylä Sigurdur, Antonio Completo, Carlos Rivera Pineda, Jeldrik Kirschbaum	

Moodboard&Process

Self initiated project.

In a world like ours, saving time and having in general a **good relationship with time** we think it's crucial.
We think that we probably live in the age where too much time is spent randomly and uncritically on social media precisely because the whole environment is organised and designed to attract and tempt us.

It is interesting to note that from various reports and videos you can see online it is glaringly obvious, when you ask people directly how much time they spend on their phone per day, how they answer each time, before actually checking their phone, an average of two hours less than the actual time.

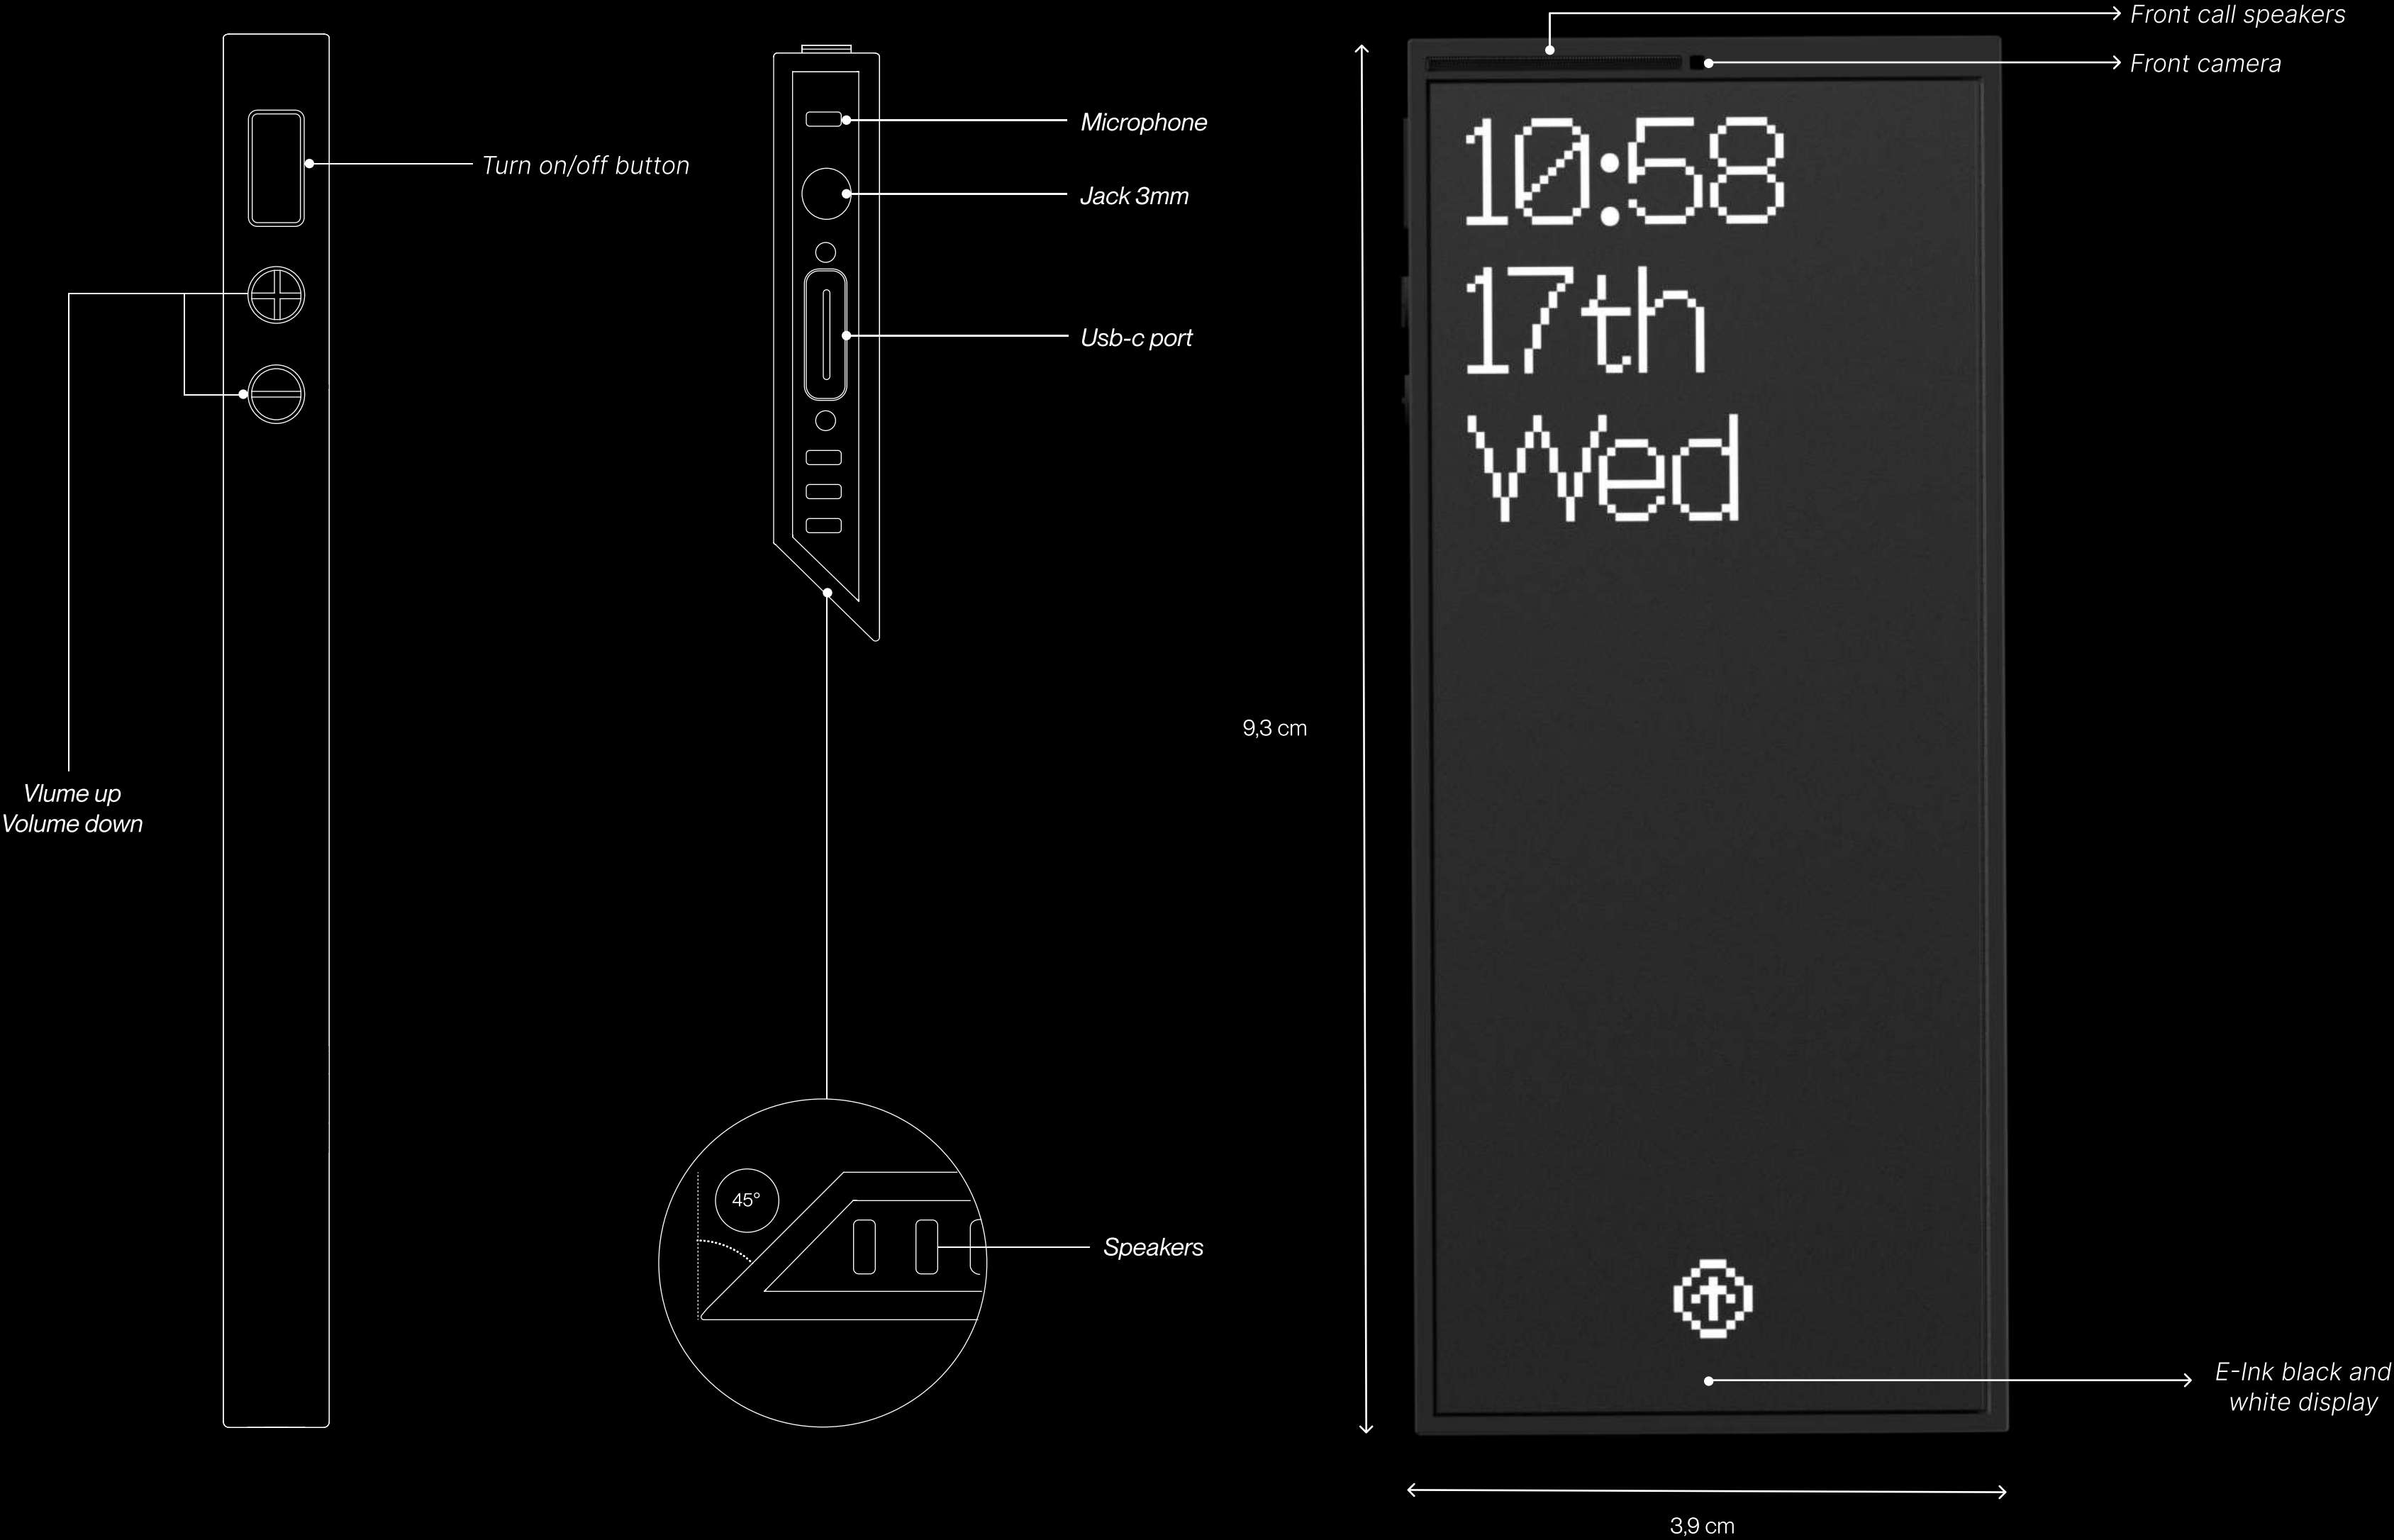

We want to point out for this reality to highlight the problem even further, we live in a world that is presented to us as full of opportunities and projections, a world where the value of time is increasingly only associated with productivity, with work, and does not mention less and less the great even educational role that time spent discovering oneself has, to reflect in peace, to **explore for the very sake of exploring**.

FINITURES
INSPIRATION

Functions&Details

Therefore, we decided to build a device that was thought to be understated and minimal, while at the same time trying to combine a fashion aesthetic that could be iconic but at the same time unobtrusive and rigorous. Going into detail regarding the device, on the right side we can find the device's screen standby button along with the two volume buttons. As for the bottom part we find the **3mm jack** for connectivity, a **usb-c** port for charging, a microphone output and speakers. As for the upper side of the device we decided to insert a **Killer Switch**, the name itself is meant to evoke the relevance of this switch, chosen instead of a more common on/off button, a switch that once pressed, allows you to disconnect power from the device, completely turning off all the functions of the main system, in order precisely to improve the focus in the client's personal activities. The **second stand-alone system** on the back shell, based on a small **solar panel** placed underneath a small **LED screen**, allows for a small digital clock that is always on, in case it is needed for study activities, simply placed on the desk or on any surface.

Renders

Thus, the **side cut** on the shell has not only a metaphorical function, but completely **transforms** the device from a cell phone when held in the user's hand and pocket to an equally elegant and minimal **table clock**, which respects and concretely aids the **moment of study and/or concentration**, suggesting among other things that the user place it face down when seated at a table to avoid unnecessary distractions.

10

Renders

We have embedded in the outer shell of the phone a tiny **independent secondary system** formed by the simplest and most functional of digital clocks powered by an underlying **solar panel**, all with this iconic pointed shape intended in its crudeness also to symbolize the difference that exists and should be emphasized in the approach between our and other phones, but not secondary in the hierarchy to functionalism.

A minimal software

for a minimal device.

12

The choice of how to structure the layout and UX and UI therefore fell on the search for minimalism and **simplicity**, which are perfectly represented by the scheme of the **Swiss typography**, whose clean and **timelessness** perfectly matches our objectives.

Attention economy

An hot topic.

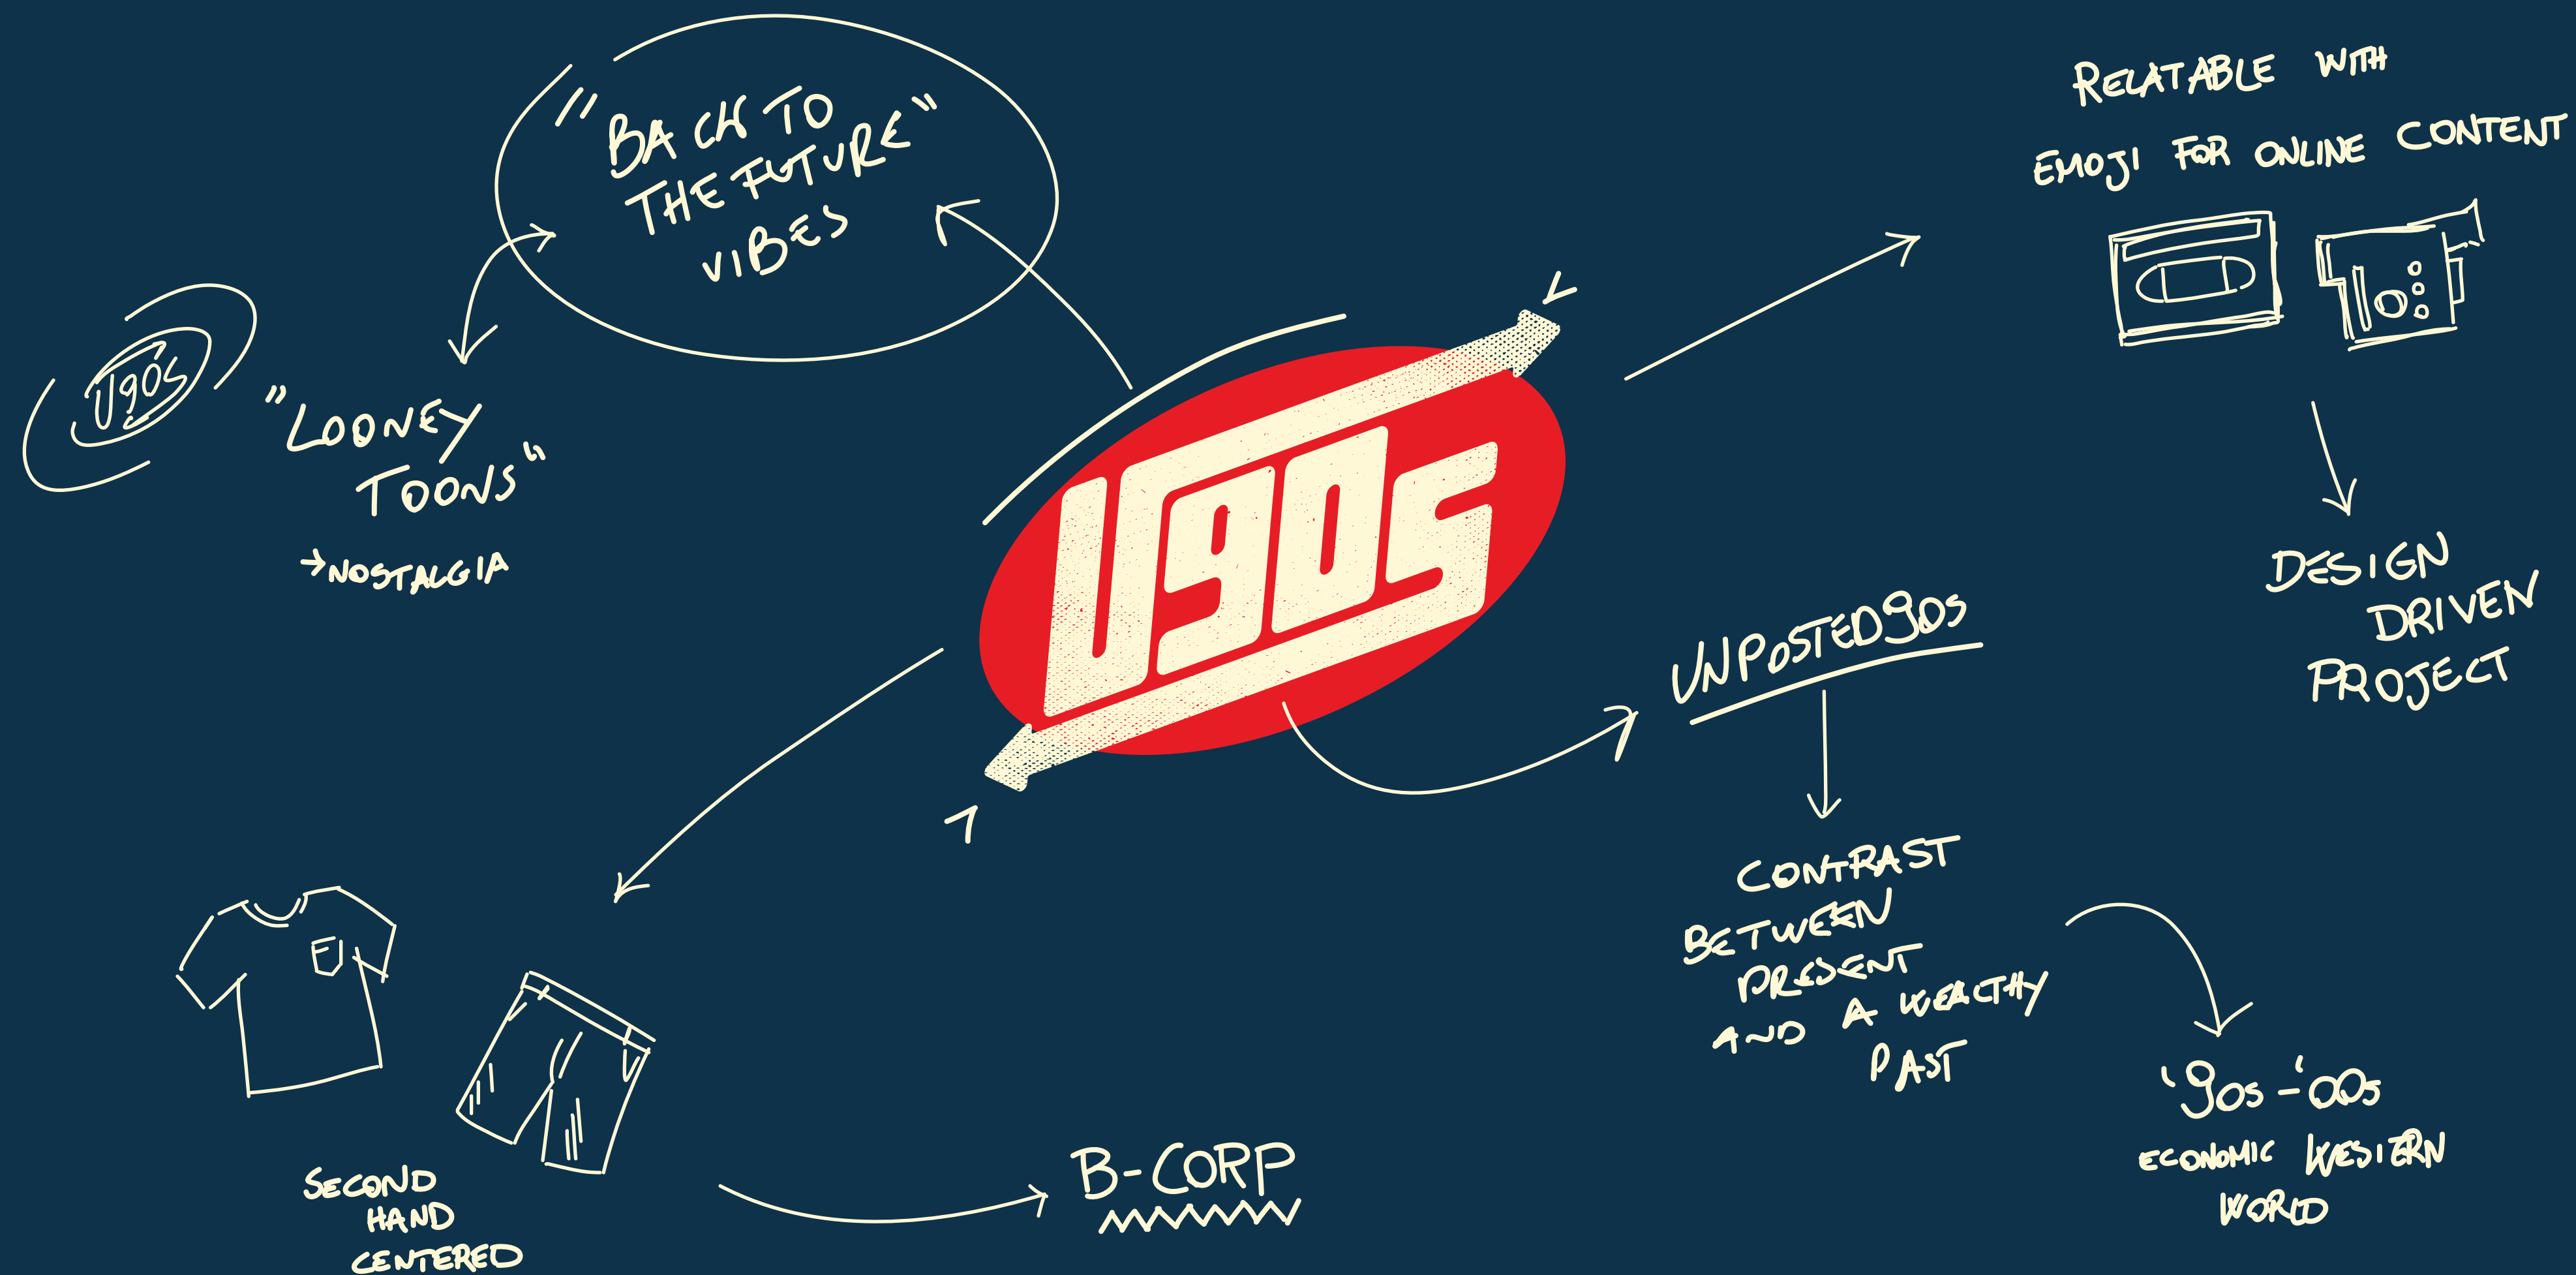

The choice of such a topical and sensitive subject in these times led, partly due to another ongoing publishing project at KISD, to the decision to **develop** a **physical book** that dealt in detail with the development process of Ohne Phone.

Within the book I go into detail regarding the moodboard, what problem the phone wants to solve, by whom this problem is dealt with in the world, which texts, which **philosophers** and which **theories** led us to consider this a relevant concept and one worth investing time and resources in.

	02	
	Unposted90s team project	
15	Brief → 3rd place winner at IUAV University of Venice Startup accelerator “Starthub” in 2023 edition, the project started 2,5 years ago in my garage, Unposted90s is the main italian YouTube channel that talks about fashion with a focus on secondhand and vintage clothing.	
	Role: Art director, content creator Duration: 2,5 years Type: Team project, private project Software: Photoshop, Da Vinci Resolve, Illustrator, Office suite	
	Made in Conegliano (TV), Italy	
	w/ Leonardo Piai, Leonardo Pilat	

Editorial approach

Thumbnails and formats.

A design driven project

Much of the work I have done regarding this project has to do with its creative direction.

Pragmatically then, in addition to editorial choices and giving direction, my role has involved a lot of finding meaning in the videos and making them consistent over time, writing content then and researching themes, devising videos and strategy for the growth of the project, managing to marry our goals, while also being attentive to the wishes of the audience.

As anyone who makes videos on YouTube well knows, having a good thought-out and consistent editorial line, especially for a project like ours, which is very **design driven**, is crucial.

PERCHÉ → SPACCA?

19

Format: “Perché spacca?”

(“Why is it sick?”, fashion in-depth format)

With this format, our idea was to bring informal insights to the stories of the brands examined in that particular case. Through this format, we were able to bring more in-depth content to the channel, giving depth to our product, managing to channel audiences from the visibility of simpler formats such as lists of the best shoes, sneakers, etc.,

20

02
Unposted90s

Format: Stores explorations
(Vintage excellences tour)

The goal of this format is to tell the stories of entrepreneurs and venues in the Veneto areas that would speak of an entrepreneurship focused on the world of vintage and thus the second-hand philosophy. So our goal was to be able to modernize the storytelling for the general public of what is a used garment, enhancing it.

Format: Fashion challenges
(1 vs 1)

Challenges have always been our preferred format. The idea of having a place to test our creativity and skills in creating pieces or assembling outfits by involving the public in voting for a winner has always been something we have been very involved in. It turned out to be one of the most successful series on the channel.

FASHION CHALLENGE

“StartHub” Experience

IUAV startups accelerator.

Third place winners!

In February 2023, we decided to apply the project to the **IUAV university's startup accelerator** course. This was an experience that was crucial for us in being able to give us a mapping of the context, thanks to the valuable notions that we learned here precisely we were able to **go deep**

into asking ourselves what added value we could bring to our audience, what our **purpose** within this project could be and what it meant to build a business model, to interact with other stakeholders. After going through an intensive class period and talking with experts in the field including

Lorenzo Fabbri, fashion designer for the brands 545 and Wanderlust, we got to compete with other applicants in a presentation of our pitches, a competition where we came **third**.

22

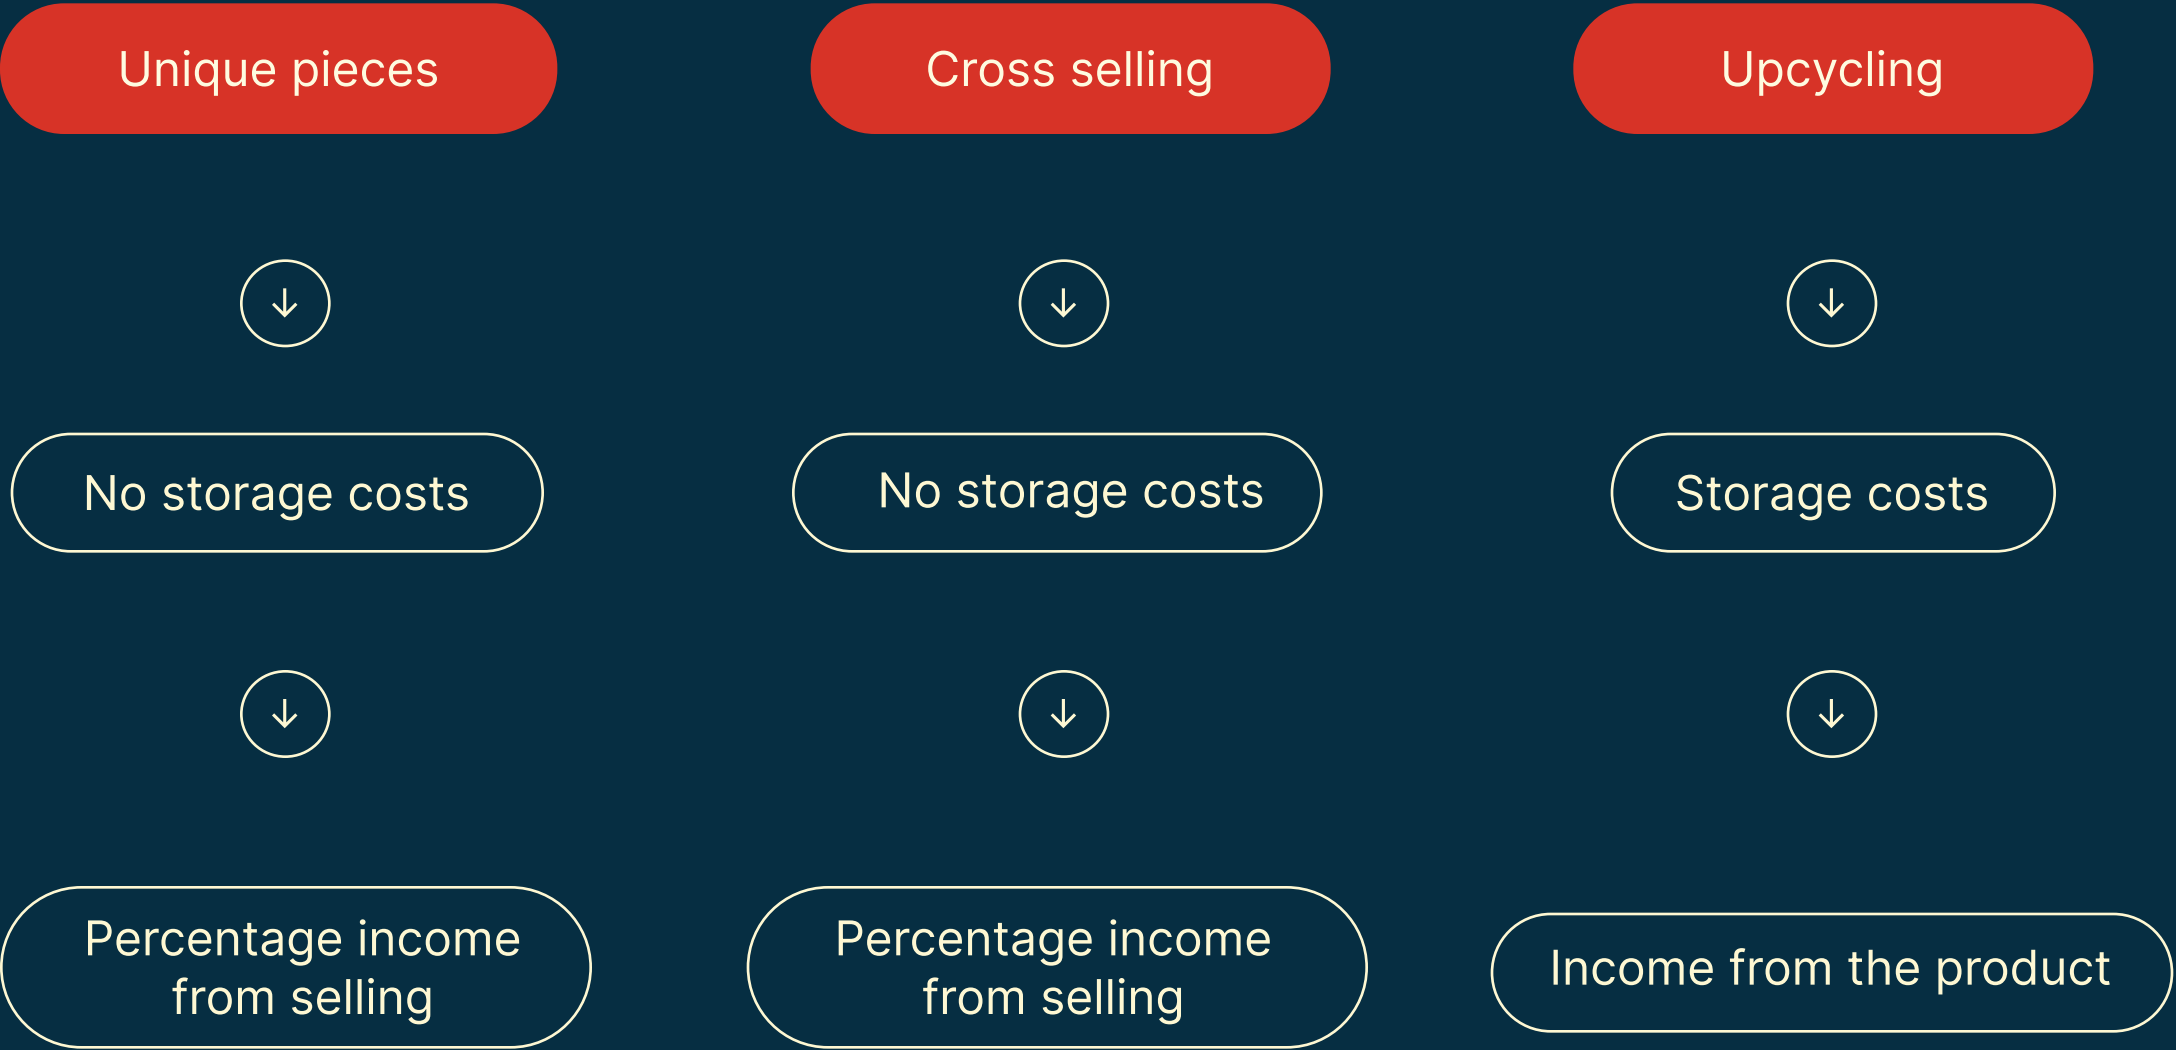

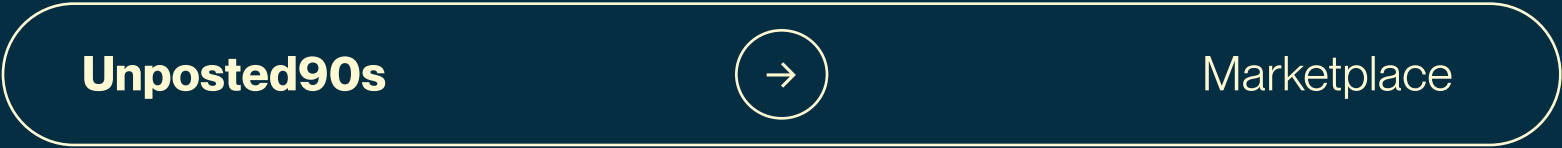

PossibleCollabs&BusinessModel

brands that could work with us.

Aesthetic and business

A crucial aspect definitely concerned the monetization of our product. After going through the courses proposed to us by the university and being compared with similar projects on the market, we were able to sum it all up in a **business model** focused on single online sales and collaborations with brands that espoused the **values** at the core of our project, thus the valorization of vintage and the second-hand world.

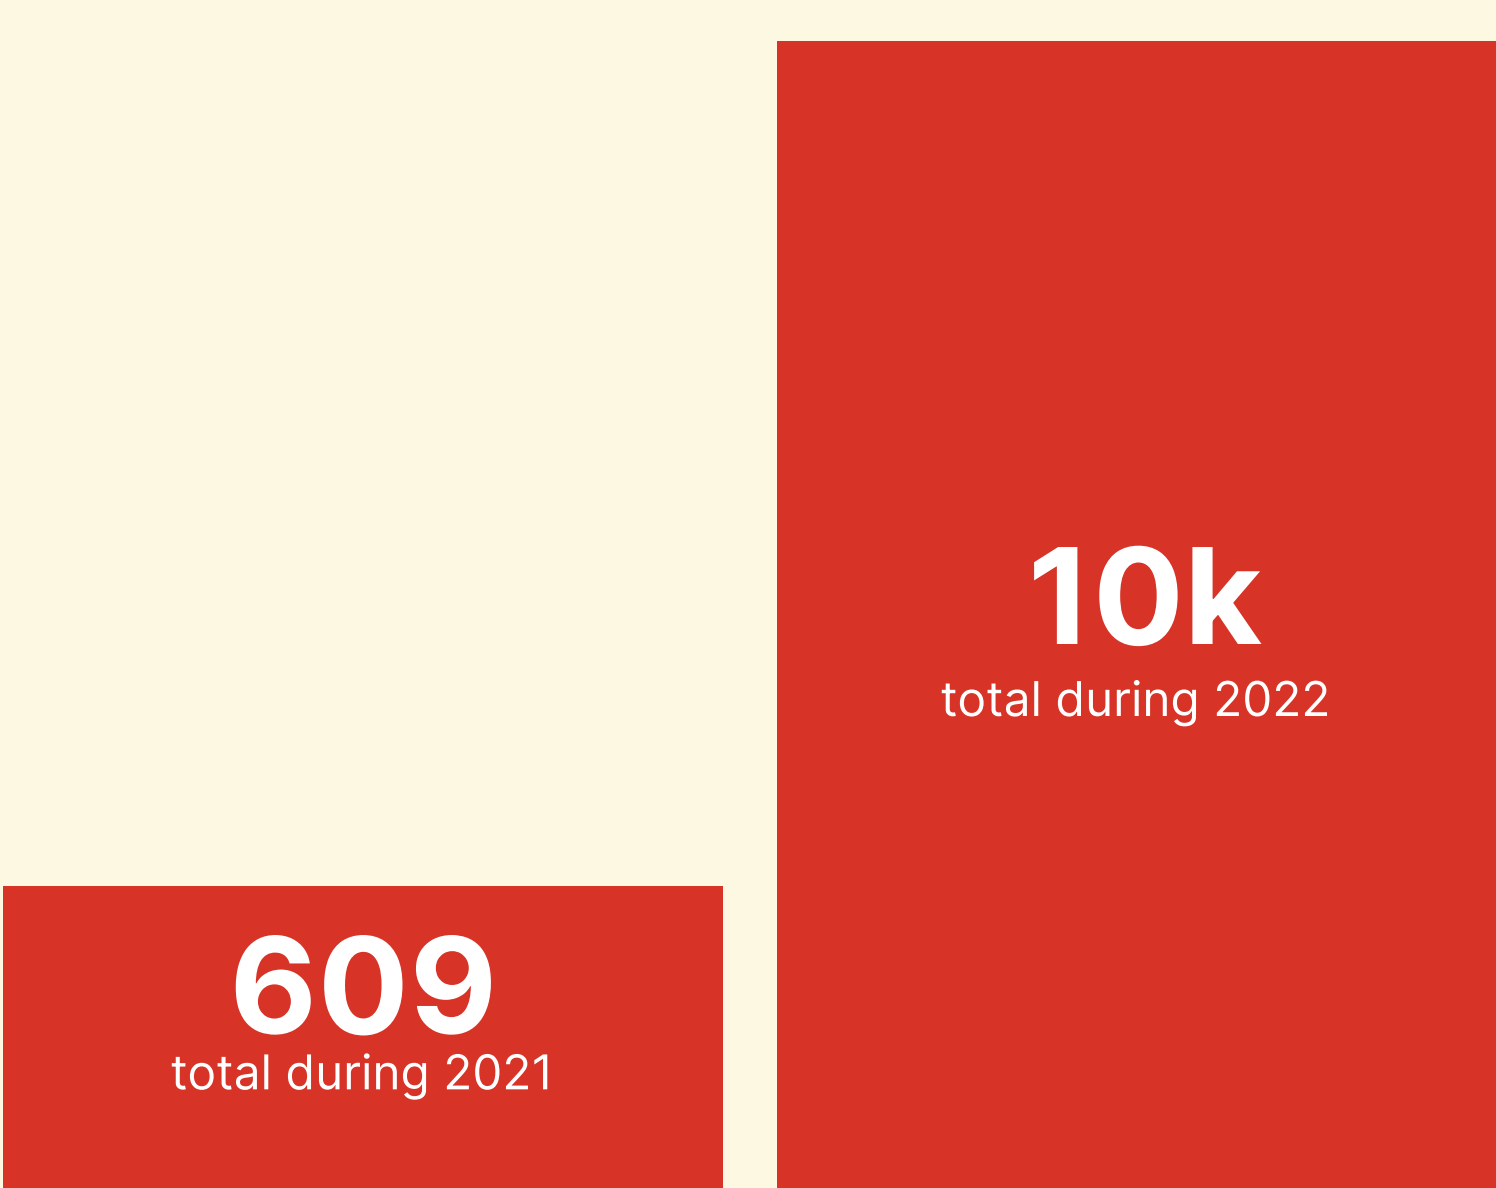

Some datas&analytics

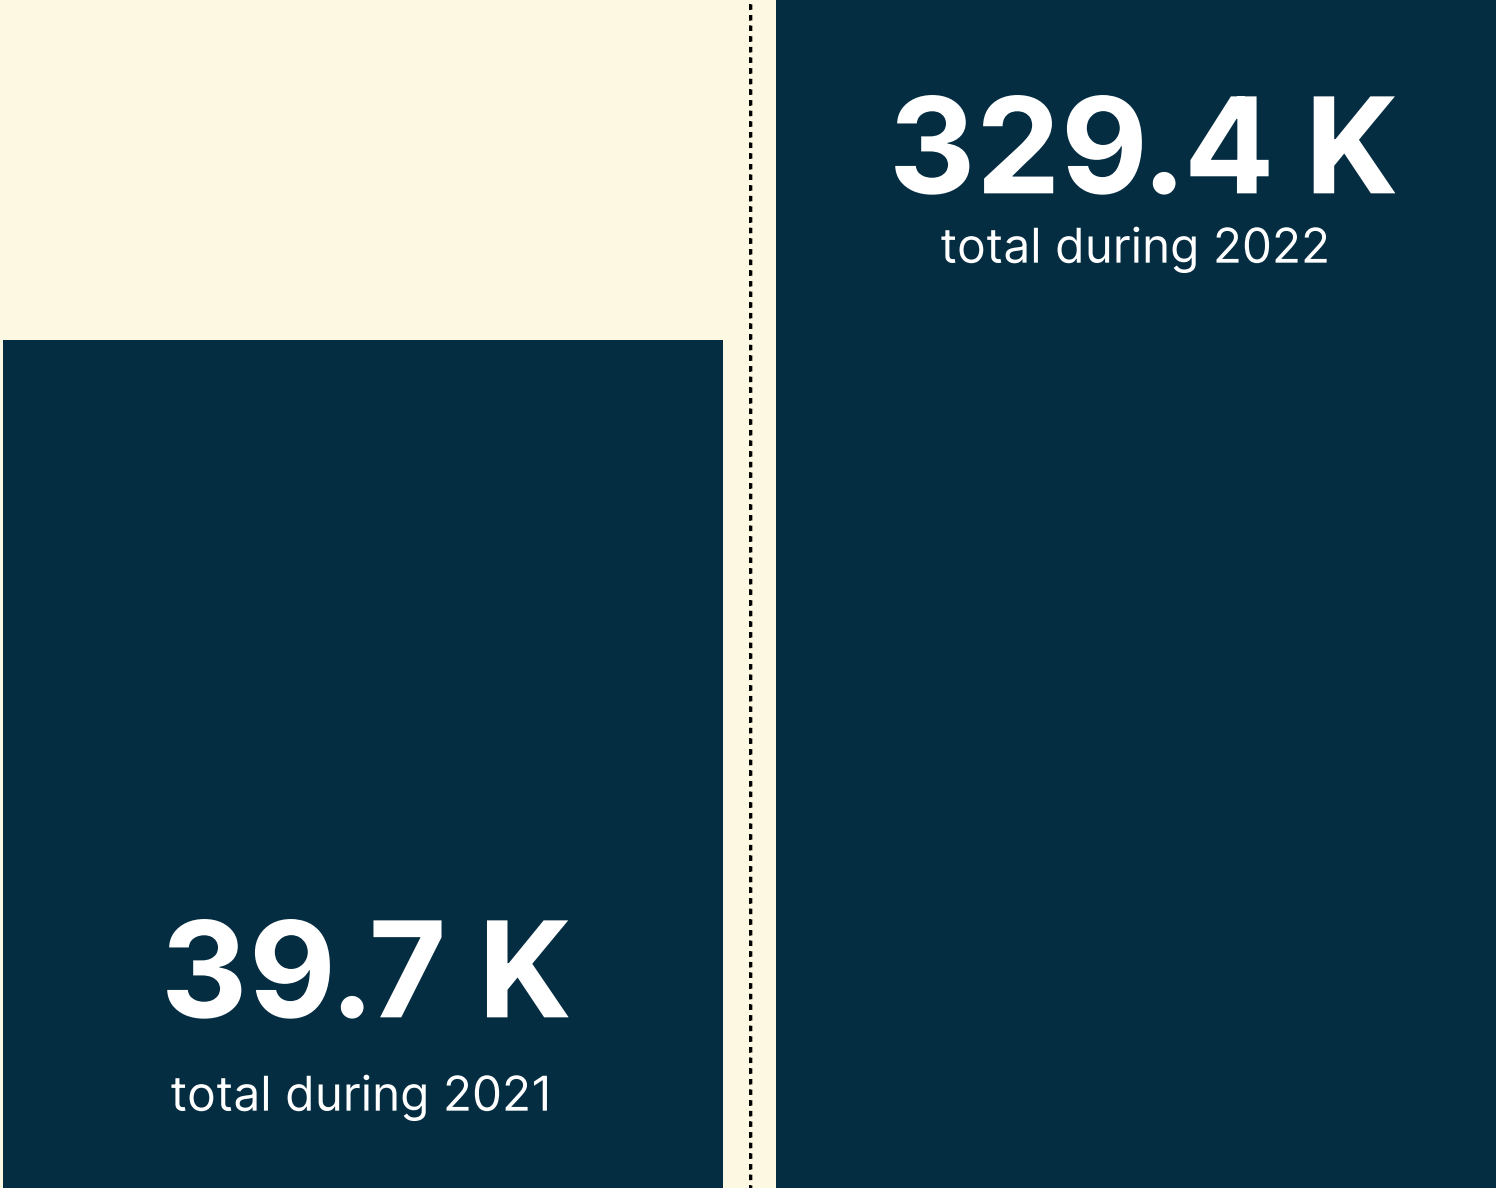

An in-depht view.

Since the channel was born in June 2021 we have seen a relevant exponential growth since summer 2022, both in subscriptions and views.

Subscribers:

Some datas&analytics

Part two.

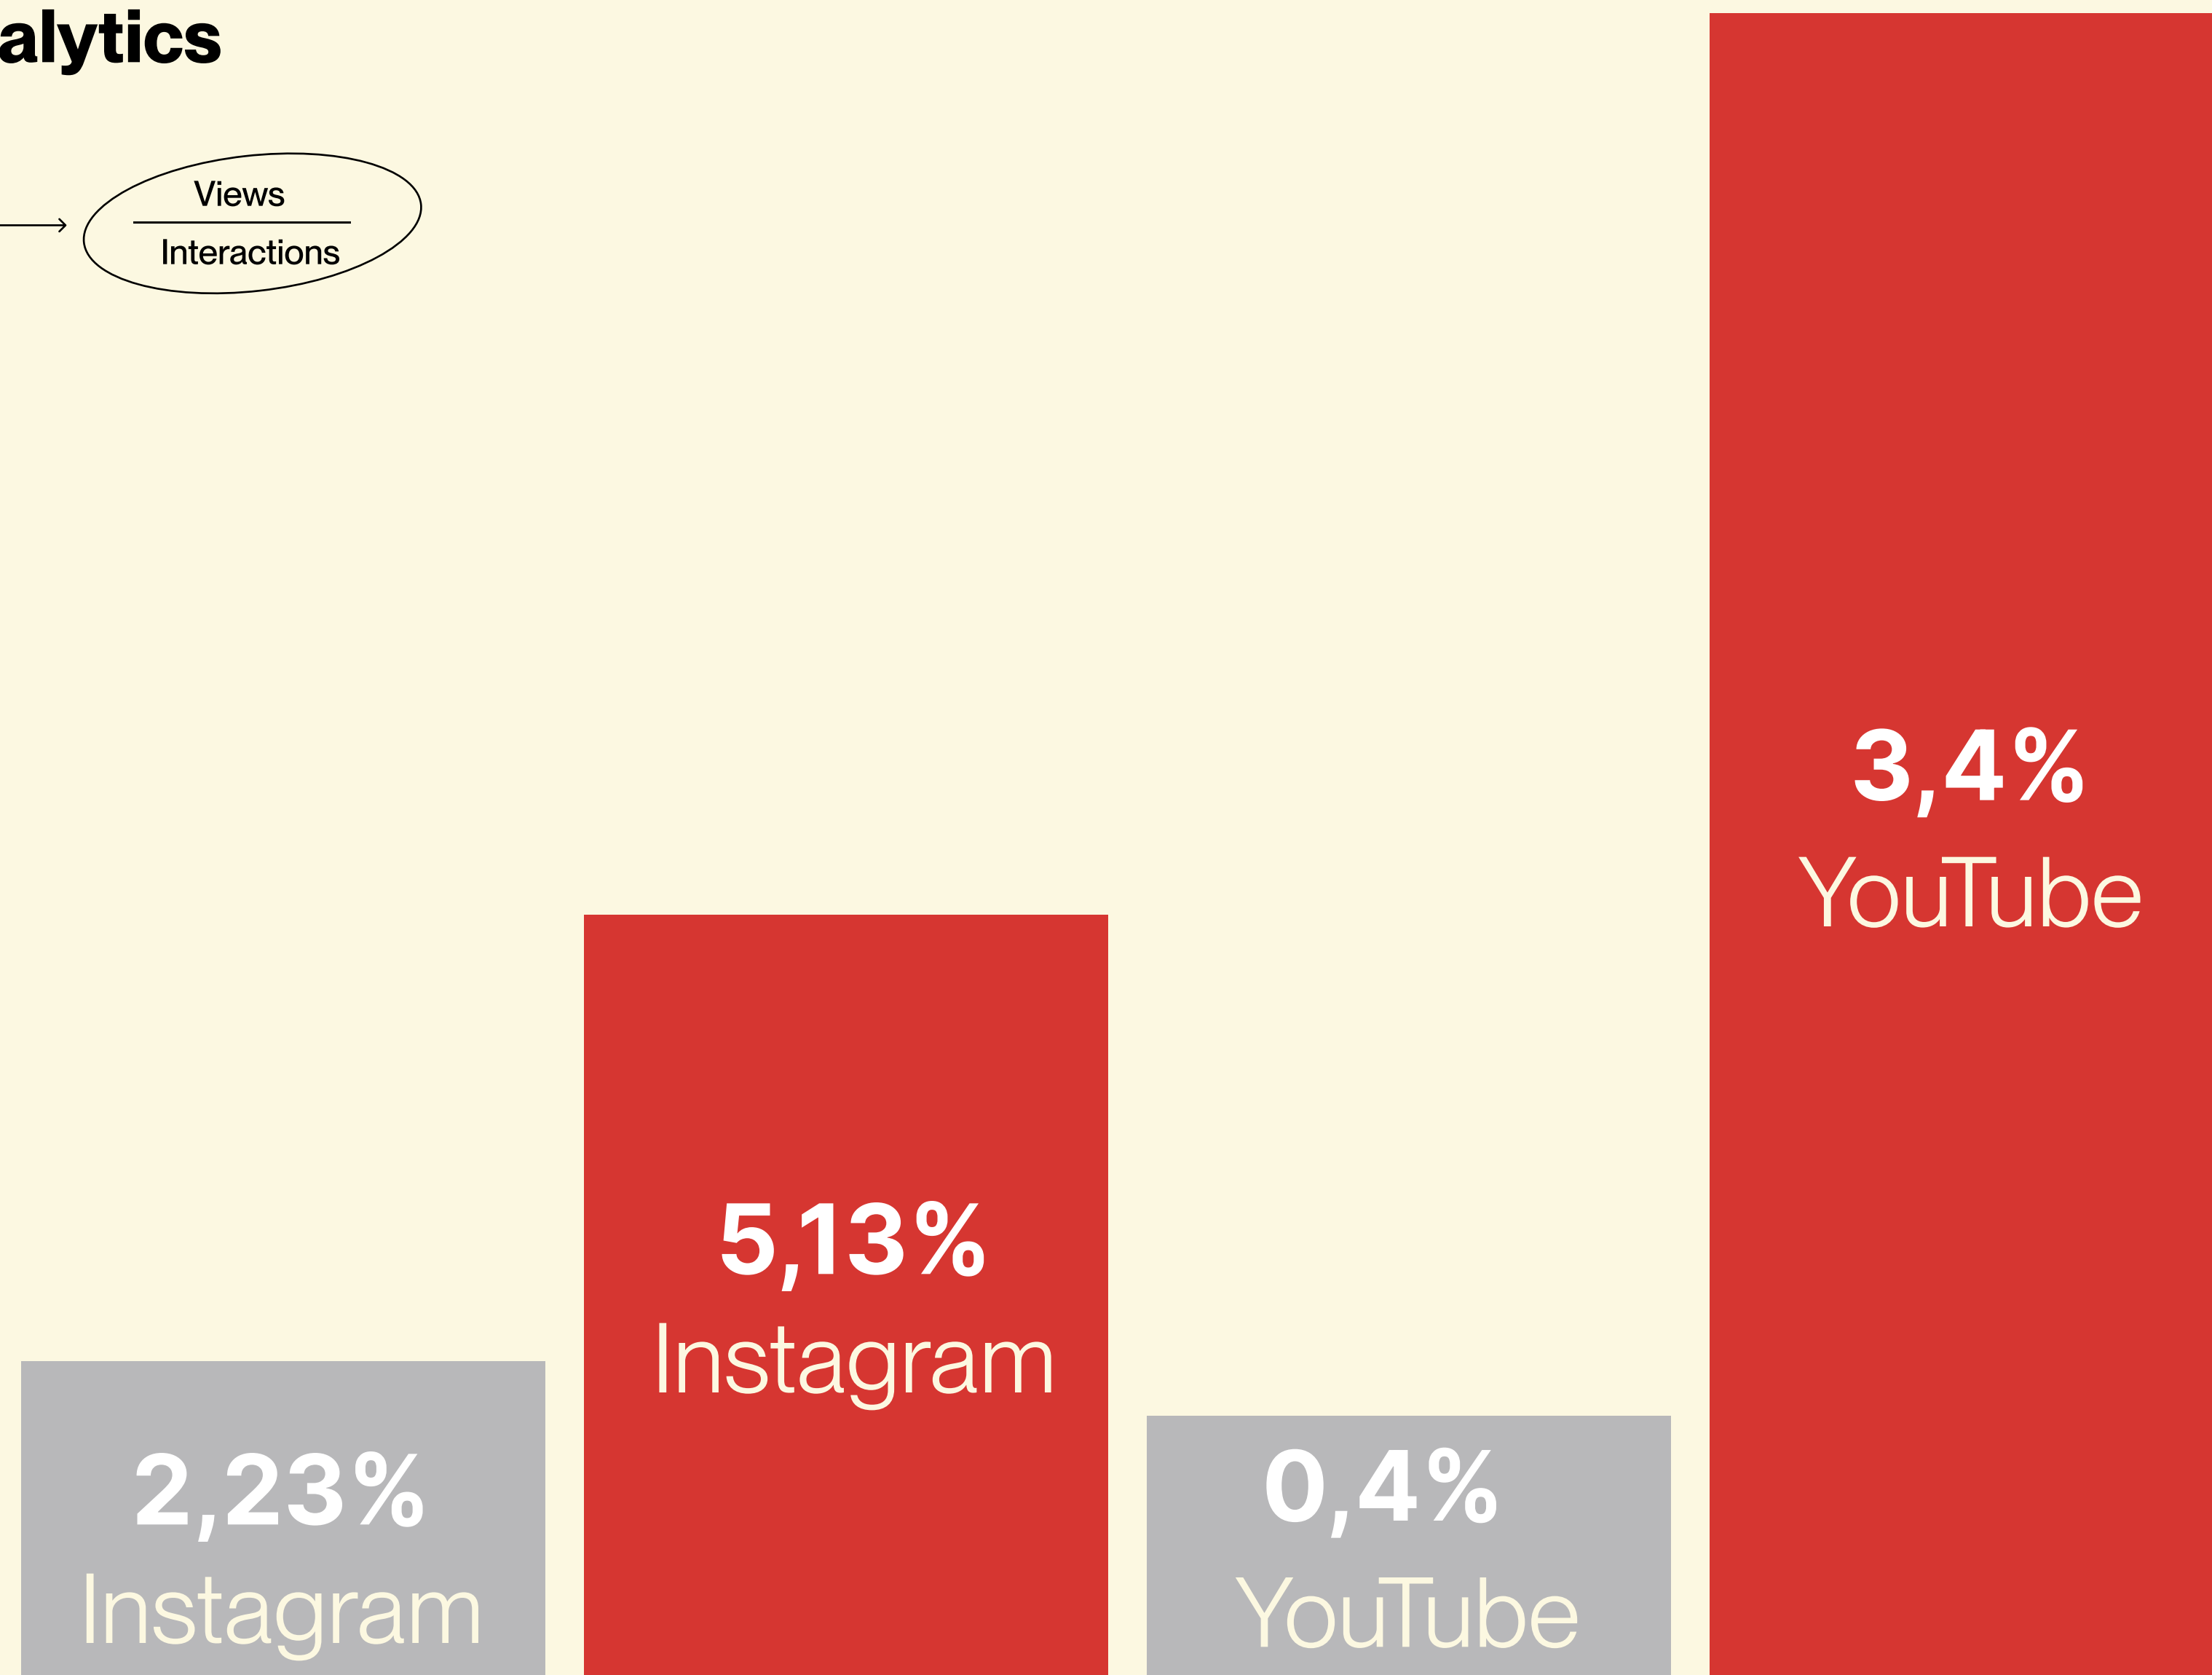

Engagement rate

The engagement rate is one of the most **important** indicators to take into consideration when deciding to invest in a particular social account. It is the ratio between views and interactions, a figure that tells us how much of the public actually interacts with a given profile, through likes, comments and subscriptions it is in fact possible to get an idea of how much can be converted into sales.

$$\frac{\text{Views}}{\text{Interactions}}$$

	BeeSmart team project	
26	Brief → Starting from 2023 WGSN report, the group had to design a business focusing on western society market trends, highlighting reference field, using design thinking and service design methodologies in order to put together a realistic presentation and prospective of the business.	
	Role: Service designer Duration: 4 months Type: Team project, university project Grade: 2nd year Software: Illustrator and Figma	
	Made in Venice, Italy	
	w/ Collins Nnaemeka, Vittoria Luria, Vasile Oanta, Flavia Doda, Elisa Fano, Cesare Silenzi.	

BeeSmart

An organized ecosystem of work and family.

An holistic approach

BeeSmart is a smartworking space with the option of childcare. This will enable new parents to reconcile work and family life while avoiding their overlap. BeeSmart aims to be a hub for smartworking workers. It presents itself as a welcoming and attractive environment for all those smartworkers, new parents or people with the prospect of becoming one.

• Kindergarden area

• Food court

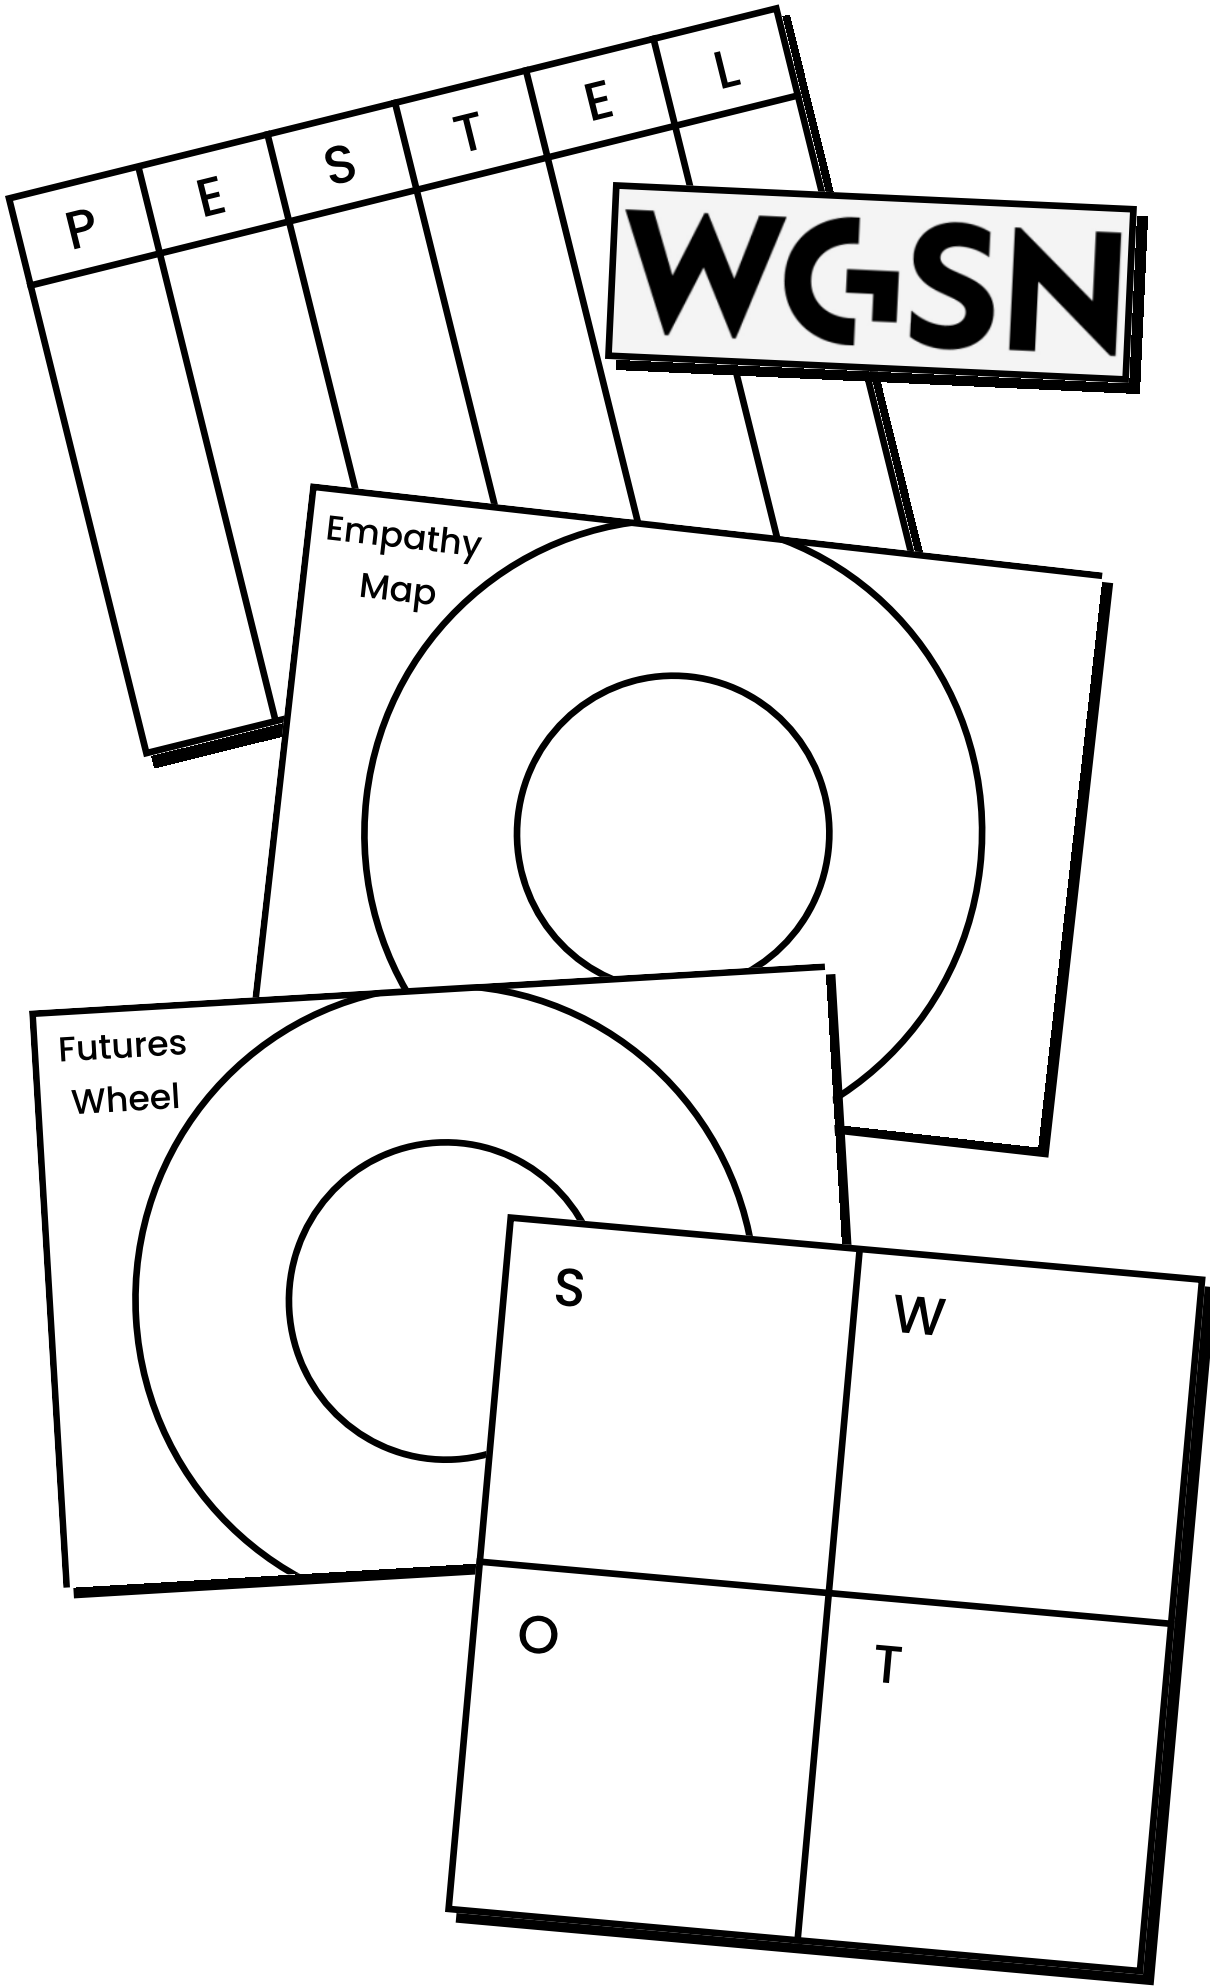

• Offices aera

The process

From WGSN report to our solution.

Starting from the **WGSN survey**, we chose to analyse profiles of people marked by the sentiment of tragic optimism working in smartworking. Analysing the field through pestel analysis and its possible future trends with the help of the **Futures Wheel**, we found how time management and the size of physical spaces greatly influence the organisation of work and people's lives. This holistic view then allowed us to draw a clear map of workers' needs and expectations.

We went on to purposely interview 25 people with a similar profile to the one we selected from the WGSN research, once collected we summarised this into **two main personas**.

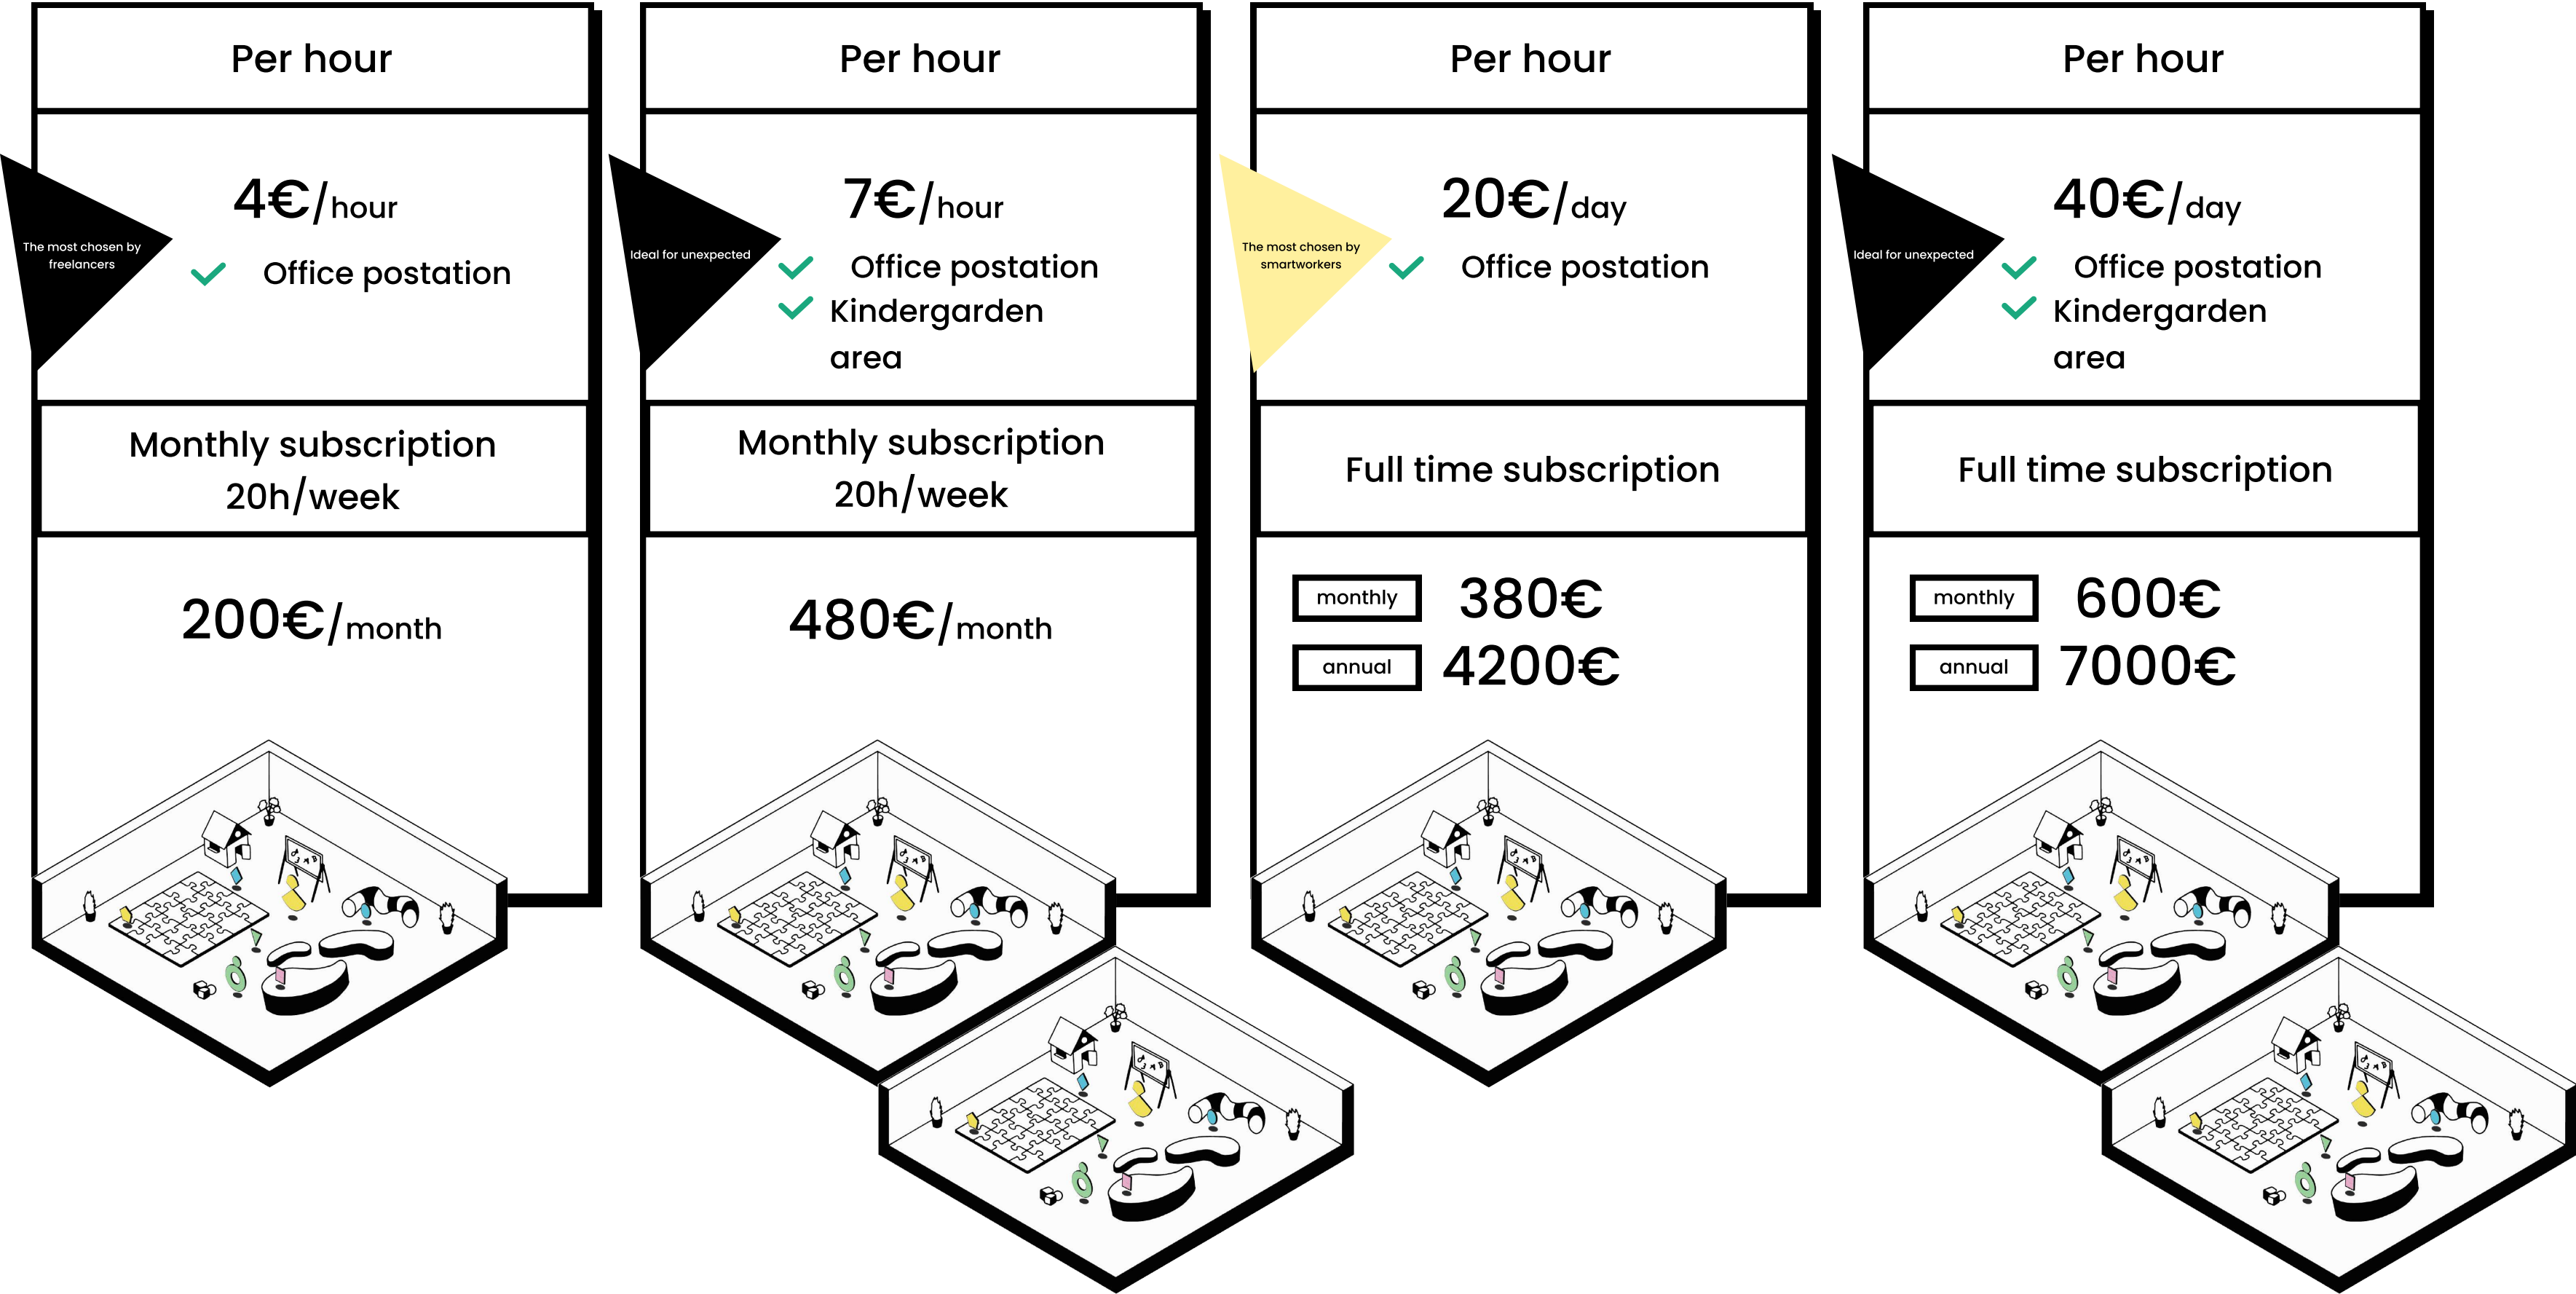

Valerio24 years		Desires	
		• Computer engineer • Smartworker • Home worker • Suffers from loneliness • Alienating space	Separation between working area and bedroom Ergonomic enviroment To have a quiet space where to work
⌕ Pains He's missing a contact with the outside world He's missing a space where having just work He needd a chat with the other between the breaks		✓ Gains To evolve his own indipendence A space where just work To have a quiet space well illuminated	

Alice32 years		Desires	
		• Senior Architect • She mainly work in smartworking • She has a newborn son • She likes fitness	Having an help in order to manage the kid's life. To know other new parents. To have a space only dedicated to her job.
⌕ Pains She focus differently between home and office Being a parent means having two jobs She is scared for her working career.		✓ Gains Smartworking helps her saving time.	

Packages

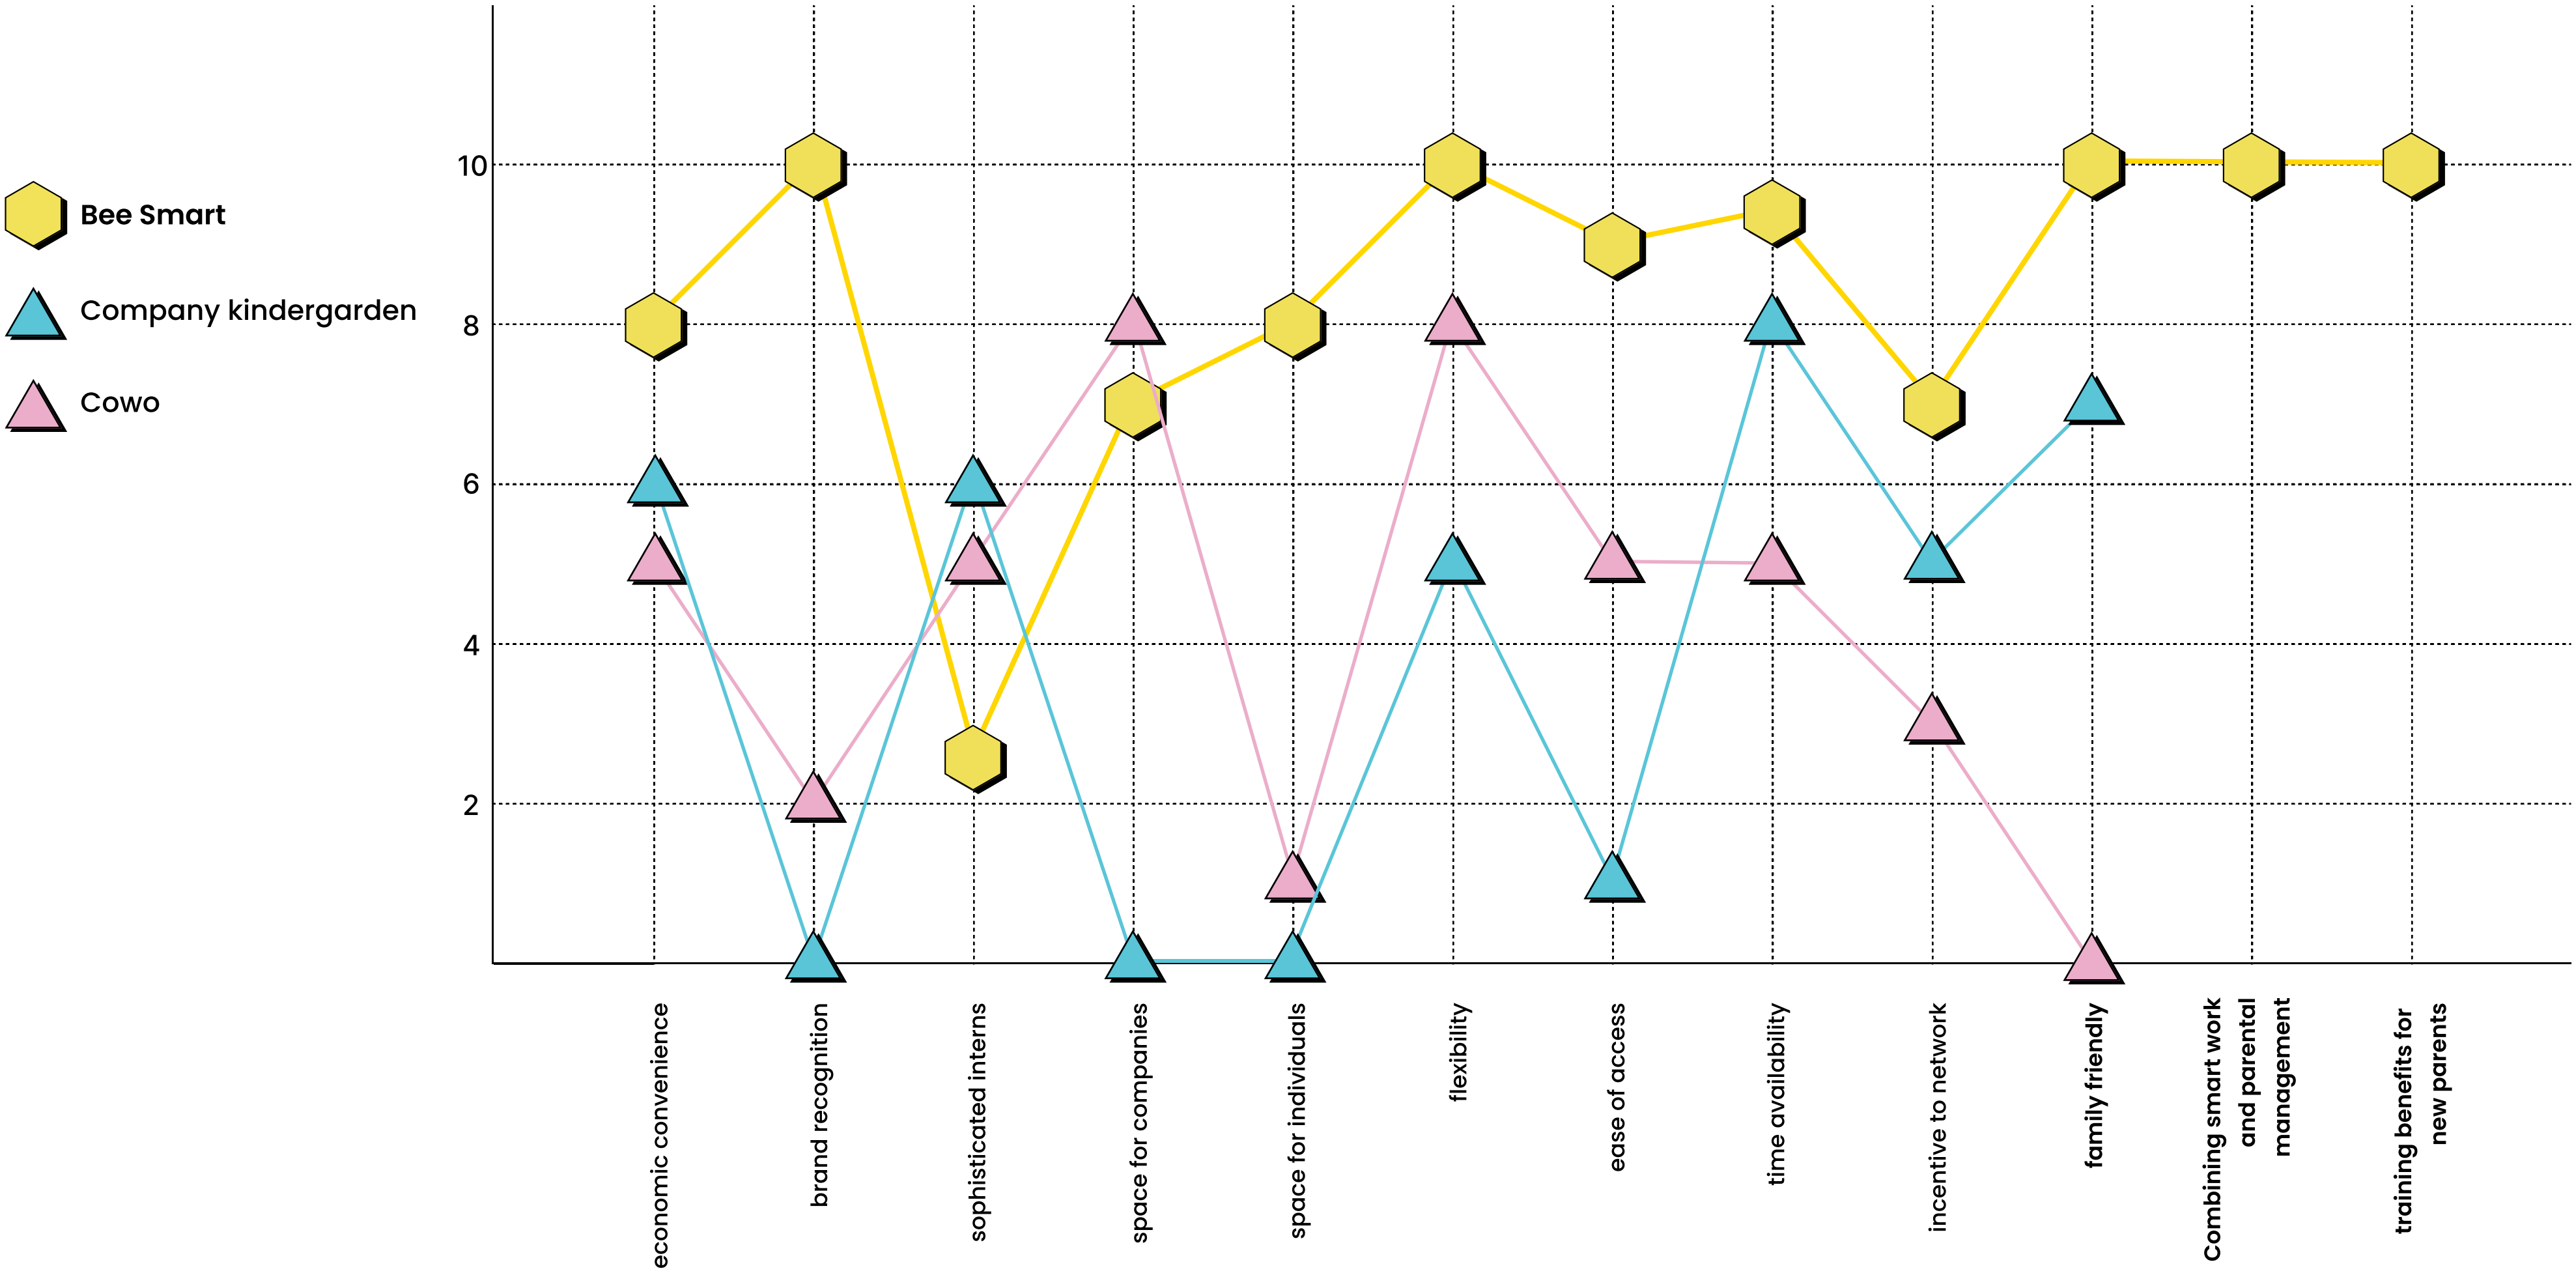

Subscriptions options.

Based on the collected qualitative data and personas, we decided to create four main offer packages for our customers, trying to build a competitive option for a given need.

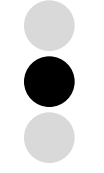

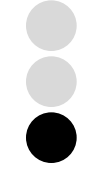

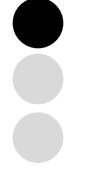

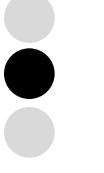

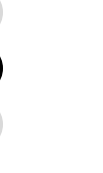

Why to choose us?

Our blue ocean

Customer journey map

(Alice)

Time	6:30	7:30	8:30	9:30	11:00	13:15	14:00	16:30	18:40	23:30
 Journey What does the customer do?	Alice woke up and prepare the coffee.	breakfast with the hausband and check the agenda.	She gives the kid to the teachers.	She takes a look at the bulletin board for next week's events.	Alice go asking what the kid is doing.	She eat with her colleagues and talks about the programmed events	She get back working.	She goes back taking the child from the kindergarden area.	The husband starts cooking the dinner while Alice is dedicated to her hobbies.	The family goes to sleep.
 Touchpoint What is the customer interacting with?	The clock on the phone.	The agenda on the phone.	The child, the teachers and the kindergarden.	Office ambient.	The child and the teachers.	Colleagues and new parents.	Coworking space, computer	The child.	Books.	Husband.
 Customer Though What's the customer thinking?	"Another day is starting"	"It's tough to get everything done today."	"Thank God there is somebody who takes care of Leo."	"This event looks very much interesting."	"did they change his diaper?"	"I've seen that the event will be about sports, it's gonna be interesting!"	"here we go back at it!"	"Now we go back home with dad."	"Finally some relax."	"Tomorrow it's your turn!"
 Emotional journey What does the customer feel?										
 Process ownership Who is the protagonist in this moment?	Alice	Alice and her hausband.	The child.	Alice	Alice	Alice	Alice	Alice	Alice	The family
 Pain points What problems does the user find?		The agenda is full of appointments.	"Can I trust this people and give them my child?"	I'm not prepared regarding this topic.	She is worried for the kid.	"Do the other new parents think that this event is important as well?"				
 Opportunities Potential gains about the experience		Possibility to have a private space in order to organize better.	Competent and reliable figures.	The possibility to participate at this event.		Opportunity for comparison.

	Link Backpack team project	
33	Brief → Link was born from a concept: tension. Link is proposed as an innovation in group excursions: it's easier if you do it together. Through the shelter it is in fact possible to organize refuge spaces, and with friends it can be done in a completely new way, our intent is to make collaboration central to adventures.	
	Role: Product designer, modelling and rendering. Duration: 4 months Type: Team project, university project Grade: 2nd year Software: Figma, Marvellous designer, Clo3d, Keyshot	
	Made in Venice, Italy	
	w/ Collins Nnaemeka, Emanuela Blajim, Anna Tramontin	

Moodboard&Concept

product design laboratory

Tension as main focus

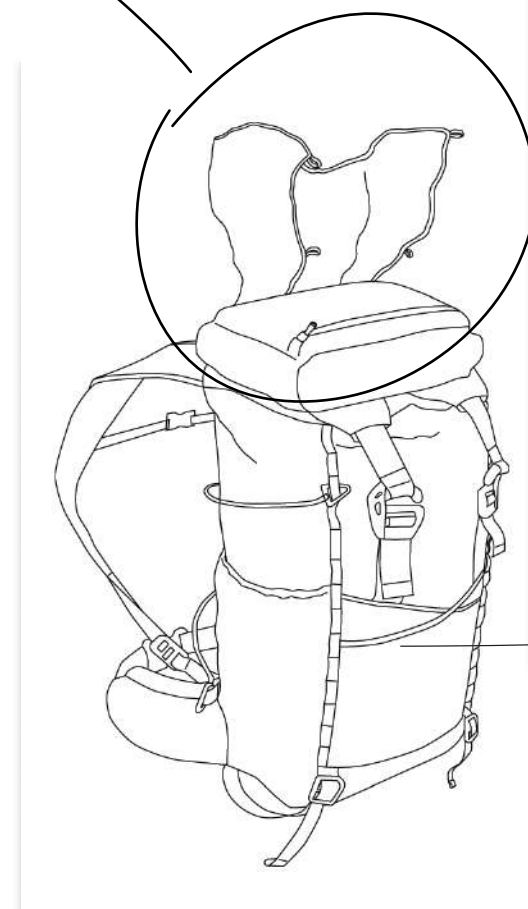

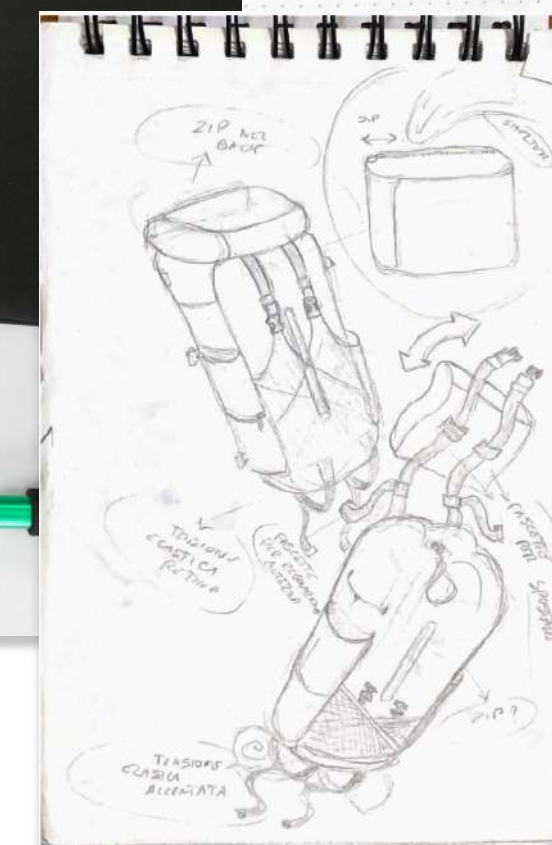

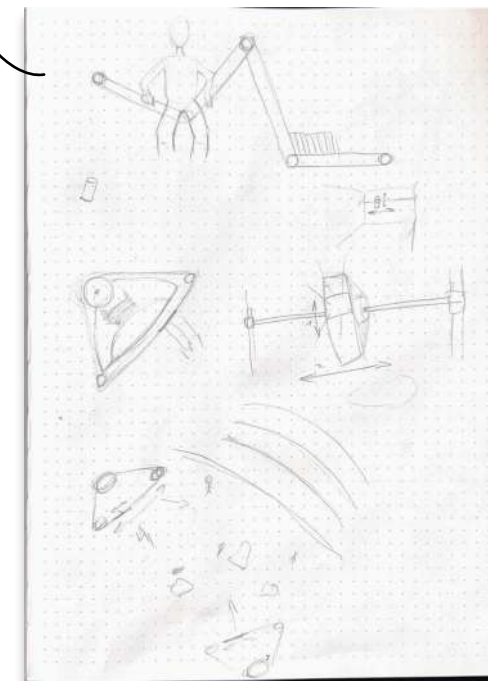

Link was born from a concept, tension. Through group brainstorming, interviews and comparisons, we designed a backpack-shelter that can accompany any hiker. Link is proposed as an innovation in group hiking: it is easier if you do it together. Through the shelter you can indeed organize shelter spaces, and with friends you can do it in a completely new way. The name Link refers to our intent: to make collaboration central to adventures.

Ripstop fabric is a lightweight, Nylon-spun material that resists tearing and tearing. In addition to military uses, Ripstop fabric is also commonly used for camping equipment such as tents and outer sleeping bag covers. It is also used to make hang glider and paraglider wings, parachutes, hot air balloons, sails, kites, flags, banners and sportswear. Ripstop fabric is made from a mesh weave of nylon threads on a fabric base. Many fabrics can be used to make the Ripstop fabric base, including cotton, silk, polyester or polypropylene.

Materials

(product design laboratory)

Link also features carabiners and buckles, carabiners that, in addition to being an important hiking tool, are used to **secure the shelter** when needed.

We opted for a **PU-coated fabric**, making it **water-resistant**, more rigid and stable. Specifically, we chose Challenge **RBC200 fabric**, **200den recycled polyester**, PU coated, 100 g/sqm.

With Link you can join your fellow travelers, the shelter features **four zippers**, one on each side, so that new, more comfortable and spacious configurations can be formed. Starting with the widespread and classic patterns of the hiking shelter world, you can expand your horizons with this feature.
